Why this overview paper?

In the presenter's yearly interview, where he has to report his activities throughout the year, the following characterization went undisputed;

ライネルト研究室は学部のように初心者の授業から研究、教員教育(FD)まで広い幅の活動としてコースを提供します。

(Reinelt Research Laboratory offers much like a faculty a wide range of courses from beginner all the way to preparation for studying in Germany as well as the research and faculty development necessary for this).

If in an organizational context such as a university, learners continue to come to courses which can be developed further, two things are adamant: Continuing and developing courses further, at best into a recognized "program", and: creating the new organizational context and conditions for maintaining such courses as a program. For the latter, argumentations and supporting material have to be presented and the rest of this paper aims at demonstrating how and into what the "program" evolved and how it could develop in the future.

Participants

As any university course has to be created with live participants in various roles, these should be defined in advance in order to avoid too personal ascriptions in case of issues.

First, there is the university context, with all the positive (freedom, learning facilitating environment) and negative (limited financial resources, administrative barriers) characteristics this involves.

Within that context, we find the learners, in Japan usually 18 to 22 years of age, who, except for majors in that language and a few literature departments, usually only can or, at most, have to attend one year of German, or any other second foreign language, during their general education courses in Japan.

From among them, a few may want to continue after the first year in courses here termed DK (German communication), S1 to S3, and at some time even S4 (super courses 1 to 4). The presenter teaches five first year (=beginners) courses, each with up to 50

students, but only very few learners continue in the second term after second foreign language (2FL) courses have been scheduled for 4 pm recently, with the students already at their physical limit after two to four lessons before on that day. All non-beginner courses are voluntary and unpaid, and have to be developed by the presenter in accordance with the few (two to seven) participating learners. There are also administrative regulations which have to be followed or bent so the courses can take place as intended. There are also time restrictions to be followed or extended. All these courses appear on the transcript as **発展科目**, especially developed courses. Further data are given throughout the paper.

As the target language of the courses is German, many points and target language phenomena in this paper remain in German. In some cases the Japanese wording is important and thus upheld. In case translations are wanted, please contact the author at reinelt.rudolf.my@ehime-u.ac.jp.

Abstract

In a time when students come to second foreign language (2FL) courses beyond the first year although there is no bracket for their courses, the teacher has to offer courses and develop them further on a daily basis. At that, all professional progress had to be developed from scratch. This paper demonstrates how the author's research laboratory developed into such a faculty like state and what became necessary and what it has to offer. In particular, part one this contribution briefly outlines the characteristics of the presenter's first year courses. Part two introduces the teaching system as it has been designed by the presenter for four years of German general education courses and their representation in the transcript. Part three outlines some of the requirements of such courses and demonstrates how the presenter attempted to meet them. Part four briefly introduces (the students' and other) evaluations of the courses and comments on their most recently holdings. Part five introduces future tasks such courses pose e.g., for research. All information given was valid at the time of writing in early January 2017, but circumstances have changed considerably since then, and only a few changes could be integrated in the most recent versions of this paper.

Introduction

1. Characteristics of the presenter's first year general education German courses.

1.1. Conditions

1.1.1. Unfulfilled conditions

1.1.2. Initial questionnaire: The students' wishes

1.1.3. The goal of university general education second foreign language learning

1.1.4. Speaking and Outsourcing

1.2. Key contents

1.3. Characteristics of the author's courses

1.3.1. Comparative speaking time German and English

1.3.2. Feedback

1.4. Disadvantages

2. The system: Four years of German courses in General Education at Ehime University

2.1. The four-year system in one overview

2.2. Course contents, tests and certificates

2.3. Grammar and conversation

2.4. Research, courses and faculty development

2.5. Criteria for the four-year-system

2.6. Scheduling

2.7. Testing and recycling for testing

3. Requirements of the non-beginner courses and how the presenter attempted to meet them

3.1. Introduction

3.2. Factors and multidimensionality

4. Evaluations of the courses and comments on the most recent courses

4.1. Evaluating the learners

4.2. Grammar

4.3. Writing

4.4. Phrasal German

4.5. Evaluating the classes

5. Conclusion: What has been attained, and future tasks

5.1. Habitual Native Speakers

5.1.1. Advanced learners as "habitual" native speakers

5.1.2. Scoring the first-year oral exam: Evaluations
5.1.3. Advanced learners as oral exam speaking partners
5.2. The virtuous circle of learning German and the future of 2FLL in Japan
5.3. Other Findings
5.4. Future tasks
6. References

Introduction

While the Japanese Ministry of Education pays lip-service to internationalization (Robertson 2015), its recent practice of abolishing non-technical courses and the reduction of required other foreign language courses at present or former national universities EhU (2015b, JGG (2015)) proves the depreciation of social science courses including foreign languages.

Nevertheless, a number of students majoring in various subjects at the presenter's Ehime university have requested follow-up courses to his extremely optimized first-year introductory German general education courses. This continued for the second, third and fourth year. Finally, students have become able to continue their German learning in graded courses until simultaneously majoring in their subject. The second to fourth year students developed superior German speaking abilities and could ensuingly serve as scorers and eventually as speaking partners in first-year students' oral examination dyads. Eventually, the presenter was able to build up a system of four years of continued and graded German second foreign language (2FL). Ample research has accompanied the course development and makes it available to research far beyond Ehime University. A considerable amount of presentations and papers about various aspects of the courses is already available on request from the author, therefore we limit references to a minimum.

1. Characteristics of the presenter's first year general education German courses

This part will especially mention characteristics of the first year which may lead the students to ask for a second year.

1.1. Conditions

1.1.1. Unfulfilled conditions

Lets start with the preconditions of the author's 2FL courses in the studies in this overview article. At the same time they are the background to placing it in the scientific context:

At Ehime University, a second foreign language is compulsory only for humanities, general politics (fac. of law & letters), (and until 2016) the international course of paedagogy (fac. of education) students; all others (excluding medical students) may take a

| And a few other characteristics supportive of FL learning (又はいくつかの外国語習得を助ける性格を持っている要因) |

Table 1: Unfulfilled conditions of the course in this study at Ehime University

second foreign language course, if their schedule permits: Still hundreds did take such courses since the university reform in the early 2000s, but the recent change to the fifth period has practically reduced their number to a few, depending on the language. The following languages are on offer at Ehime University, Matsuyama, Japan: Chinese, Korean, German, French and Philipino.

There are also a number of conditions, which are not the case, but are supposed to have positive effects on language learning if fulfilled (table 1).

1.1.2. Initial questionnaire: The students' wishes

Table 1. Course introductory student questionnaire

| 設問と答え | Questions and answers | No of answers |
|---------------------------|--|--------------------------|
| この授業で習いたいものは何ですか | Item 1: What is it that you would like to learn in this course? | Total 196 |
| ドイツ語会話全般 (日常会話)使えるドイツ語 | All of German "conversation" (Everyday "conversation") Useful German | 110 |
| 会話全体 | Total mentioning of "conversation" (kaiwa) | 137 |
| これを達成したら満足します | Item 2 I would be satisfied if I reached | Total no. of answers 182 |
| 会話全体: | Total mentioning of "conversation" | 102 |

According to the author's term-initial questionnaire (administered at the end of first class), the course had to focus on speaking, as can be seen in table 2. The questionnaire asked for what students would want to reach to

1.1.3. The goal of university general education second foreign language learning

Despite a lengthy and intensive search including contacts with specialized teachers and researchers and members in important association positions, the author has not been provided with nor able to find a standard and nationally recognized definition of the university general education second foreign language education. (Reinelt: 2010) thus defined the subject as follows as in table 3:

Table 3: The overall main goal of university 2FL education

(For any second foreign language:) sufficient training in the five abilities of **speaking, writing, listening, reading** comprehension, and **translation**, as well as in **the learning techniques to acquire** these. The course should also enable the learners to **make abstractions and analyse intercultural phenomena** pertaining to what is dealt with in class. A further requirement is making the best **use of technical developments** for speaking.

1.1.4. Speaking and Outsourcing

In language learning, out of the five abilities (four skills + translation), which cross-influence each other inseparably (Reinelt Kansai Dai Nishinomiya?), **speaking** is the only one which can be practiced and learned only in class. This results in the need to vacate time for speaking, as all other abilities to be outsourced from the classroom. With nowadays ubiquitous internet connections, reading, writing and of course listening can be practiced everywhere and, as in the case of time-limited university courses, should thus be, after an introductory technical instruction, and in the sense of independent learning, be outsourced, for example to LMSs such as Moodle as much as possible.

1.2. Key contents

Administering the course and optimizing it over many years resulted in some of the following course contents key points being considered necessary (table 4 (G) and (J)), although many more are actually dealt with in class.

Table 4(G): First year course contents key points(G)(list not exhaustive!)

Table 4(J): First year course contents key points(J)

be satisfied, not do under any circumstances, would allow the teacher to do, and prefer especially. The result in table 2 is well representative for the last twenty years of its administering

Table 2: The course-initial questionnaire (example 2014)

EhU (2015a)

- Guten Tag! (Var. mit/ohne Herr, Frau - Tageszeiten) - „Tschüß!“ - Abschiede
- „Wie geht's?“ (- Bewertungen)
- „Wie heißen Sie?“ (4 Teile, Variationen)
- „Was machen Sie in der Freizeit?“
- „Haben Sie Telefon?“ (Ablehnung, Ironie, 0-9)
- „Haben Sie Familie?“ (Verwandtschaftsbezeichnungen - 3. Person, (Charakterzüge -) Adjektive)
- „Oh, wie spät ist es?“ - Bruchzahlen, (20-99)
- „Und was essen Sie gern?“ (Speisen, Getränke je 3)
- „Entschuldigung, wie alt sind Sie?“ (3)
- Datum, „Was machen Sie morgen?“ (einen Tag beschreiben)/ Wochenende (alle Zeitangaben, Sätze mit trennbaren Verben und Zweitstellung (Tagesablauf, Wochenende, (Ferien)planung usw.)
- „Wie heißt Ihre (in Deutschland recherchierte) Stadt?“ - „Wo ist das denn?“ - Himmelsrichtungen, Gesprächsmanagement: „Augenblick bitte“, „Keine Ahnung!“, „Ich suche mal.“
- Fragewörter: Frage - Antwort - Nachfragen - Detaillieren usw.
- Dinge und Preise erfahren und nennen, kommentieren, Kommentare aufnehmen

疑問詞、質問、答え、nachfragen、詳細を求める・言う
物の名前、値段を聞く、上げる、コメントを上げる、受ける、返す
引用：

Research in the authors' classes has led to the conclusion, (recently also supported by Oota's German teachers association' presentation (2017) results) that in the actual course, it is not (rather: not even) necessary to cover these contents especially not consciously (and especially not advisable to teach grammar explicitly), but rather to incite learning and/or communication, part of which the contents above will then be.

1.3. Characteristics of the author's courses

The approach presented here below is different from many previous ones in that it includes among many other features

- short units (usually 5 to 20 minutes), which become increasingly longer, first practiced by the learners (Meyer 2010);
- very little “teaching” by the teacher (De Florio-Hansen 2014);
- introducing new contents by “spacing” over several weeks and delayed written representation (Reinelt 2005, recently Bury 2016a and b);
- no vocabulary learning as such;
- little writing in class (but students still learn it);
- very few explanations;
- grammar being made explicit only rarely;
- learners checking other learners;
- doing, especially speaking, before "learning" (Marui & Reinelt 2007);
- a year-final oral exam on the A2-level where the learners speak spontaneously and without props with a target language native or habitual native (s. below) speaker different from their course teacher.

Other characteristics and more detailed descriptions can be found in Reinelt (2017a, c, d, f, Marui & Reinelt 2007) and many other papers on request.

1.3.1. Comparative speaking time German and English

For learners with previous FL learning experiences, it is interesting to state their progress relative to the other language(s) learnt previously (as such, comparisons are made unconsciously anyway). Japanese students speak in their foreign language courses to different amounts. These amounts can be compared and offer an interesting - although subjective - comparison (Table 5).

Table 5: Target language speaking time of Japanese students

Speaking with a target language partner spontaneously without props across eight years of FL learning 2008-2015

Abbrev: UDSZP uninterrupted dialogic speaking time with a partner in min.; LZ learning duration; D=German; E= English; KT course participants; MS (Target language) mother tongue speakers; KL course teacher; J=years, W=weeks

words: nebenan= person sitting next to you, abgebrochen=terminated by.

| LZ E | 6 J | 6 J | 6 J | 6,5 J | 6,5J | 7 J | 7 J |
| UDSZP E: Min | ?? | ??? | ??? | ??? | ??? | ??? | ??? |

1.3.2. Feedback

Traditionally, many students stop coming after the first term, although all 2FL courses at Ehime University are designed as one-year (four quarter) courses. This may be the case due to the difficulty of the course, which may make many students stop coming throughout the term rather than failing in the term-final exam.

Another reason may be that administration fails to make it clear to students that the courses are one-year rather than one-term. However, since last year (2016) the learners have been speaking with German native speakers or habitual target language native speakers (Reinelt 2017c) already in their oral exam at the end of the first term. Since speaking with a native(-like) user of the target language is the utter goal of foreign language learning, this success may be a good reason to quit.

That this is at least in the realm of the thinkable can be demonstrated from the feedback received from the students in the term-final questionnaire developed by the author. Table 6 gives examples of the Japanese original as well as translations into English and the target language German.

Table 6: Feedback

Source: Reinelt 2015 The Virtuous Circle: Student feedback term/year final questionnaire (1,2,4 = WS 2014)

| Nr. .6 | Japanisches Original | Deutsche Übersetzung des Verfassers | English by the presenter |
|----------------------|---|---|--|
| 1) | ライネルト先生が積極的に話しかけてくださる授業だったので、ドイツ語を話すことに対する抵抗がなくなりました。ペアを作つたりして、クラスの人とたくさん関わることができるようになりました。1年間とても楽しかったです。 | Weil es ein Unterricht war, wo Herr R uns positiv angesprochen hat, ist der Widerstand gegen das Sprechen auf Deutsch verschwunden. Die Paarbildungen und das Kennenlernen von vielen Leuten in der Klasse war sehr gut. Das Jahr hat mir sehr gut gefallen | because RR talked nicely to us, our resistance to speaking German vanished. Pair work and getting to know people was very good. |
| 2) | ドイツ出身の人と話すのは緊張したけれど、1年間でここまで話せるようになり、うれしかった。 | Ich war sehr nervös, als ich mit Deutschen sprechen musste, aber dass ich in einem Jahr soweit sprechen konnte, machte mich glücklich | <ul style="list-style-type: none"> I was very nervous to when I had to speak with a German, but I was very happy, when I realized how far I had come in speaking within one year. |
| 3) SS 20 15 | 最初のところは授業についていくのが大変だったけれど、テストの時にふつうにドイツ語で会話できたので驚いた。 | Am Anfang war es schwer im Unterricht mitzukommen, aber als ich dann in der Prüfung ganz normal auf Deutsch gesprochen habe, bin ich erschrocken! | <ul style="list-style-type: none"> At first I had a hard time to follow the class, but when I could speak German normally in the test, I was surprised! |
| 4) | ドイツ語が英語よりもできるようになった気がします。 | Mir scheint, dass ich jetzt Deutsch besser als Englisch kann | <ul style="list-style-type: none"> It seems to me that I can do better now in German than in English |
| 5) | | “Gute Methode (sprechen können vor schreiben)” | (speaking before writing) is a good method/approach |
| 6) | | “Glücklich, soweit sprechen gelernt zu haben” | happy to have learnt speaking so far/much |
| 7) | | “(E-D Fortschrittsvergleichen d vorgehen)... Vergleich war gut” | E-G comparison was good |
| 8) | | „Zum Fremdsprachlernen ist dies die beste Unterrichtsform“ (SS2015). | This is the best way of doing foreign language classes |

In the first-year-final questionnaire, besides many instructive critical comments, opinions and tendencies such as the following surfaced:

- feeling having learnt something;
- reduced or no fear of speaking in the target language (Apple 2013, Gaibani 2014, Kondo 2003, Suleymanova 2011)
- success comparable to former English FL learning;
- getting to know people;
- fun;
- starting from speaking successful;
- the class file was supportive.
- rekindled want for learning other languages (Yashima 2015)
- provide self-confidence in FL learning
- learn a FL (to a certain degree).

Obviously, emotional elements (Dewaele 2015) also play an important role.

Recently (summer term 2017), one learner summarized most of these points in her comment:

Am Anfang habe ich gar nicht verstanden, was lief, und es war uninteressant, und ich wollte nicht zum Unterricht gehen. Mit zunehmenden Malen habe ich immer mehr verstanden, was lief, und am Ende bin ich über mich selbst erschrocken, dass ich nach nur drei Monaten genau so viel oder sogar mehr (Deutsch) als Englisch sprechen konnte. Ich möchte noch viel weiter lernen. Die Methode, am Anfang eine Sprache nicht zu schreiben,

sondern zu sprechen, möchte ich auch für mein weiteres Fremdsprachenlernen fruchtbar machen“.

“At first, I didn't understand what was going on and it was uninteresting, and I didn't want to come to class. However, as classes proceeded, my understanding increased, and at the end I was surprised about myself that I could speak that much or even more in German than in English after only three months. I want to learn much more. I would like to utilize this method, refraining from writing in the beginning but practice speaking, even for my further foreign language learning”.

(Reinelt 2017f)

1.4. Disadvantages

We should probably also mention that the courses by the author have a number of backsides in comparison to “usual” courses by e.g. other German or native Japanese German as FL teachers.

Such disadvantages include:

- there are few explanations, if at all;
- outsourcing of reading, writing and partially listening, so learners have to study by themselves;
- short new units with rapid contents changes allowing little sleeping in class;
- the need to solve problems oneself;
- the need to speak with new partners in ever-changing constellations.

A course with such features is simply “shindoi” (hard work) as learning outside classes and especially speaking with others is onerous for not a few students in Japan.

2. The system: Four years of German courses in General Education at Ehime University

Offering courses to students over the four years they spend at Ehime University resulted in the following system. It was developed and designed by the presenter. There are no working-group style courses, all courses students take are accredited and thus represented in the students' transcript as S(uper Courses) and thus count in addition to their graduation (Reinelt 2013).

2.1. The four-year system in one overview

Usually, the courses spiral repeatedly from years one to four, and become repetitive to a certain degree every year, but the courses offered here may not reach the final self-improving stage, due to age limitations of the author. Thus, the presentation in table 7 below is top-down (as far as the system has been developed). After the graph, the system's parts and important terms will be discussed in the body of this paper.

Table 7: The four year system

The system as in the summer term 2016

2.3. Grammar and conversation

Additionally, a new, pedagogically oriented, grammar has to be developed for and along the courses, as they are extremely optimized (Reinelt 2017a,f, 2018a) However, this usually takes a few years of parallel development and thus may never come to an end. A brief start can be seen in Table 9, demonstrating the most fundamental principles of the system and mentioning a few items of conjugation (verb system) and determination (nominal system).

Table 9: Grammar (start)

For reference from the author: 5ReinGrammatik bei RR Kommunikation Satz N V DetArtAdjNP und Forschung 18.doc

ggggggggggg Anfang Versuchsgrammatik ggg

New RR grammar

The grammar as it has to be acquired by the learners is vastly different from most usual grammars. For one thing, it is not to be learned as a conscious effort from the beginning to the end. Parts of it are however to be mentioned in case of problems or if asked for. In case detailed knowledge become necessary, any usual grammar will do, but not for the actual (German) foreign language learning.

A few principles:

Foreign language learning with RR

The goal is to learn the language TO USE, not (just) to speak about it (pole vaulter problem)

Grammar: Has very little role in language learning (and is largely ineffective, even if taught: Ohta 2017), except after introduction and acquisition as clearance. Big role in linguistic knowledge ABOUT a language, but that is different matter.

Rules: As few and simple as possible,
but there are rules (m, f, n 組違い)

Exceptions: As few as possible, but there are exceptions (gehen > gegangen)

When learning,

- always in two. Monologue is an exception
 - always **situated** and **fast**.

Situated

There is no null-context (except in linguistic theory). Introduce situations very briefly. The learners grasp the situation conceptually and a problem there. Foreign/ target language use as problem solving in that situation (Solution known in the mother tongue but **not to be said**), automatization, representation of words by visual means (rods, lines on the board etc.) but NOT letters, kanji, kana (i.e. X+meaning bearing elements, i.e. representing beyond the visual) ie.writing.

speed no one speaks slowly, staccato.
Attack fluency problem right from the start. Also helps listening!

- proceed to speaking automatization careful, but as fast as possible. Others (reading, writing, etc.) later
- chunks and adjacency pairs
- learning with spacing (brief units, extended every week up to four weeks)
- spiraling
- writing in or after the fourth time, grammar, further (written or aural/oral) practice if necessary (**ich** heisse, komme aus, wohne in,..and other practice if necessary)
- (- grasp/ get used to, replace, imitate) as much as possible from seeing (olfactory best for short term!), (learning from writing almost impossible!)

Communication situations und pronouns:

ich > selbst, self

du > Partner

andere, others = DetFl: d|er, d>s?S|ie d|as

(items: wir/ ihr)

Express feeling, before the sentence:
Mensch,....

within the sentence: das ist aber gross, auch eigentlich, wohl usw.

Questions:

contents: > no repetition in answers!
Wo wohnen Sie? XIch wohne in...

Ja, Nein (Questions) > Ja/ Nein/
Alternativ/ Reasoning for acceptance/
rejection

general rule of communication in many (not all) western countries (but not e.g. many Asian) no repetition of contents the partner has already uttered (Tannen: "I have no time to the prison ward"

German specific: hug contents by discontinuous elements

- Um 10 Uhr **stehe ich auf** / **wo**
kommen Sie denn **her**?

- Determination! (under development)-

- No use in case of utterer (in speaking!): Ich reise, ich nehme teil

English: I behold.....

Pronunciation: Inner-sentence weak words such as *wohl, eben, ja* require preceding stress!

Repertoire for beginning a sentence

(usually NOT **ich!**)

Relations: da(her, usw)

question words (wo, usw, ob, kein FW!)

Probabilities: Eigentlich, Vielleicht

Time: Um 8 Uhr

Place: Vor dem Tor/ auf dem Tisch

Subordinary sentences of various kinds: (Nebensatz) Wenn ich Geld habe,

(In)(direct)relative clauses: Was er sagt, ist richtig.

Factuals: Dass er viel Geld hat, glaube ich nicht

Before the sentence: Attention getters

Vor dem Satz:
Aufmerksamkeitserreger usw.

Mensch,

Du,

Satzanfang:

Mensch...

Special:

Und/aber/ usw. nicht gezaehlt! Und was machen Sie heute abend?

? gern, ueberhaupt, eigentlich

Partikeln: Not sentence-initial

ja, doch

wider scope:

Sentence internal structure:

Separation and hugging

Satz: Trennung und Umfassen

Vorne nur ein Element.....Elemente nach hinten verschieben.

(auch komplexe moeglich:

teil....nehmen > teilnehmenan >

teilgenommenan)

Sonder/hilfsverben: sein, haben, werden)

(Subjekt moeglichst frueh, also nach dem Verb oder den einleitenden Element bzw. Verb: wo er wohnt, Um 8 Uhr stehe ich auf)

Trennbare Elemente umfassen ihren Inhalt, dies einfacher zu verstehen als unumfasst:

aXbYc

a,b,c, (nach Moeglichkeit/ moeglichst) irgendetwas, kann aber auch leer sein.

X, Y bestimmte Elemente aus jeweils sehr beschraenktem Set

Nicht nur die beruehmten trennbaren Verben

- Wo kommen Sie **her**?

- Wann **fahren** Sie **Rad**?

er ist aufgestanden

er wird aufstehen

Grammatik bei RR

1. Lernen Fremdsprachenlernen
allgemein bei RR

Ziel des Lernens:

Was: Etwas von der Fremdsprache
beherrschen, NICHT Ueber die Sprache

Regeln usw:

- moeglichst wenige, einfache Regeln!

Ausnahmen/Items lernen, wenn noetig
gehen > gegangen

Sondern dafuer als Vorgehen:

Lernstufen, alle schnell zur
Automatisierung

- in Situation ganz kurz einfuehren als
sprachliche Loesung: Konzeptuell die
Situation begreifen, sprachliche Loesung
darin/davon (in der Muttersprache
bekannt, aber nicht SAGEN) mit
zielsprachlichen Mitteln, dieses
automatisieren ohne die Woerter zu
schreiben (d.h. anders als bildlich zu
repraesentieren)

- Chunks darin automatisieren:

- mehrmals durch Pausen (eine Woche?)
unterbrochen einfuehren

- dann schreiben

- dann u.U. Grammatik u- Regeln
moeglichst einfach

ich heisse, komme aus, wohne in,..

und weitere Uebungen, wenn noetig

(- begreifen/ gewoehnen, ersetzen,
nachmachen),

- Moeglichst nicht oder nur besonders
eindrucksvoll: Lernen von schriftlichen
Vorgaben schwer (zu automatisieren).

Kommunikationssituation und
Pronomen:

ich > selbst

du > Partner

andere = DetFl: d|er, d>s?S|ie d|as
(items: wir/ ihr)

Xxxxxxxxxx???

Gefuehle ausdruecken: Vor dem Satz:
Mensch,....

im Satz: das ist aber gross, auch
eigentlich, wohl usw.

Fragen:

Inhaltlich: > der Inhaltlich, nicht
wiederholen

Ja, Nein (Entscheidungsfragen) > Ja/
Nein/ Alternative/ Begründung der
Annahme/Ablehnung

Deutsch

- allgemeine Kommunikationsregeln:
**(moeglichst) keine Wiederholung(,
Umfassung durch Trennung,**
**allgemeine Kommunikationsregeln:
erst recht nicht woertlich (Ja, ich habe
ein X)**

- Determination! -

- Ich-Verwendung ausgeschlossen bei
einigen: Ich reise

Woerter im Satzinnern: wohl, eben, ja mit
vorausgehende Betonung!

Textbesonderheiten

Anapher/ Katapher: katapher leicht im D, beide schwer,
aber Anapher im Japanischen noch einigermaßen
moeglich

Elemente ins Gespraech einfuehren!

Nominale: VorDetArtAdjSchonN

Stellung der Elemente im Satz:

(De!)thematisierte Elemente am Anfang
(?) vor das Verb ziehen > Wenig
Anfaenge mit Subjekt, und noch viel
weniger mit ich!

Satzstellung: (Fast) Alles ist umstellbar
an die Satzspitze (oder auch ans Ende?)

Dies wesentlich einfacher zu verstehen,

da der Zusammenhang zum vorherigen
Satz erhalten bleibt.

Repertoire fuer den Satzanfang

|--|--|---|

A new system for determination, which explains most of the nominal flexions in German, is presently being designed and tested (Reinelt 2017d and e), and copies are available from the author for testing.

2.4. Research, courses and faculty development

Since the course program is unique in many respects and the only one of its kind for general education in Japan, its parts have to be tried out repeatedly and researched before and on-the-teaching. While the intermediate steps are usually presented in scientific conferences, results and proved practices (“best practices” (although unfunded!)) are developed and presented in public courses at Ehime University.

An overview of such courses offered for faculty development is given in table 10 (3 tables):

Table 10: Courses offered for faculty development for teaches and interns

Courses are held for free and open to the public, whenever they are requested by a colleague or other interested teachers. A whole year of supporting events for an interested colleague with many special papers and seminars was held 2015/2016 (Reinelt, 2017a, f, 2018a).

2.5. Criteria for the four-year-system

Not all and everything is important, and in many cases, Ehime University has been helpful clearing things up or formulating. The following is a list of criteria (table 11), which should be completed in the following years and for every class. This list also makes a distinction between the first-year and all other years.

Table 11: Criteria and parts

Criteria for the four year system and the entries I

- students (beginners, non-beginners)
- syllabus
- Moodle reference (class) file (one or two teachers)
- class contents, short-term planning, updates
- Mails from and to students
- graduations, licences, certificates
- research to specific topics (available on request)
- which classes are offered, schedule
- tests/ exams (oral/ others): ratings/scoring etc.
- feedback from students

Criteria for the four year system and the entries II

- non-beginners: protocols and homework/ contents development/ test development
 - overlapping classes
 - graduations/ transcript
 - follow up

This list is supplanted by the syllabuses as they were created for the four years of courses in consideration of the Common Framework of Reference and its steps.

2.6. Scheduling

In this part, we take the scheduling task as one example for the necessary arrangements resulting from increasing courses to become a program.

All courses are conducted by the author himself. The wishes of the students and the necessity to hold every course at least twice a week led to a considerable number of classes, listed below in table 12. Additional courses for faculty development are not yet mentioned in the schedule. The author is paid only for the first-year courses and a very basic research grant, everything else is out of his own pocket, so the schedule had to be adjusted again.

This resulted in the following classes (table 12), and we take as an example here the presenter's schedule for the summer term 2016 (including the students' numbers), including classes for

-five beginners' classes +

-all non-beginners: DK/S1, S2, S3(=S2upper in Ehime University administrative terms) each at least twice-weekly.

Table 12: The author's summer 2016 term schedule

Every field includes official titles (no name= first year, otherwise DK or S1 to S3), G for German, official administrative registration number, and number of students on average.

| SS2016 | Mo | Tu | Wd | Th | Fr |
|------------------|---|---------------------------------------|----------------------------------|--|---|

| 6 18:00-19:30 | ドイツ語 S2 10937 4 | | | | 初級ドイツ語 G I・ II 1Q A07052 2Q B07052 12 |

2.7. Testing and recycling for testing

Some students, especially in their fourth year, become very fluent in German. They can help as “habitual” target language native speakers, especially since all communication at the university with them had been taking place in the target language anyway since their second year. Making use of their help, we could offer all first year students the chance to speak with a target language speaker after one year, or even after only one term in 2016 and 2017. The scheduling overview of this testing is in table 13. Tests for the non-beginners had to be arranged separately and are dealt with below in part three.

Table 13: Learners helping testing (> English)

| 学年 year | 前期 SS | 後期 WS | 注意 Notes |
|---|---------------------|------------------|---|
| 1年生 共通教 育 1 st y learners | ドイツ 語 German1 | ドイツ語 German 2 | Partners in the oral exam: any students si+sj, from German II NS 口頭試験相手はドイツ語 1は si+sj, ドイツ語 II からはドイツ語常用者 |

| 3年生 3 rd learners | S2 | S2 | Scorer 及び口頭試験話し相手として作用 T/SA? |
| 4年生及び帰國 者 4 th y learners or returnees | S3 | S3 | Scorer 及び口頭試験話し相手として作用 T/SA? |

3. Requirements of the non-beginner courses and how the presenter attempted to meet them

3.1. Introduction

A few non-German-majoring students wanted to continue in the way they had learned this language previously beyond the first year. With students usually busy with their majors from the second year on, this is certainly conspicuous.

In the end, for the first time in Japan, students on the general education level of Ehime university can continue their 2FL (German) learning all four years they spend at university. The presenter's courses also cater to returnees. While students acquire ever more knowledge and abilities in the four years of their majoring, they can expand their German considerably at the same time, leading to effects similar to Kirchhoff's (2015).

One imaginable goal would be to reach B1 (i.e. almost their English present level in all skills (which is actually more like A2, according to an EhU English teacher) except for speaking where they usually surpass English early in the second year), but the jump from A2 to this level is probably too demanding (two students passed B1, one also B2 in 2016) (Dittrich, R. and Maenner, D. 2014).

3.2. Factors and multidimensionality

Courses for students continuing after the first year, i.e. designing follow-up courses, has to take various factors into consideration. The following three conditions are obvious:

- the students' wish for further speaking, as that is what students come for in the first place;
- outsourcing is feasible, as only a very limited part of further foreign language learning, except for speaking, can be managed in class;
- a system of preceding and follow-up courses as students should have an idea of where they are heading.

The courses' main feature, besides the speaking requirement, is the multidimensionality of each unit within each lesson.

Ideally, at least the following dimensions should be taken care of simultaneously in each and every unit /part of a class:

- advance from the year before in grammar and vocabulary (areas) (Reinelt 2014, 2015a and b);
- relate to the students' everyday life in various ways (ex. media use);
- vocabulary developing by extending from known areas to new/ related areas, but there can also be jumps into any area;
- actual goings-on in politics, society, Japan vs Germany, etc.;
- communicative development: maintain talk, new subjects, guide one's interaction, etc.

-- Aside --

Since this way of conducting classes uses teaching practices in a different way and combines them inherently with cultural elements in the very way the classes are conducted, we may speak of a new type of cultural learning. According to Altmeyer (2006) we speak of cultural learning if individuals can

- reflect on their present ways of ascribing meaning to when dealing with texts (in a wide sense of available communication opportunities of all kinds),
- adjust, restructure, change and further develop their thinking so that they fairly equal the cultural interpretations, which these texts use,
- ascribe the texts an adequate sense,
- and articulate their critique or affirmative position (Altmeyer 2006:55).

-- End of Aside -

Ideally, all contents of e.g. all German Communication and S1 classes and units can be put into a diagram where the mutual links can be shown. Reinelt (2016a, b) shows how this can be arranged in threads which can make the relationships even clearer. However, as tremendous follow-up work for every class is required, especially if there are a number of similar classes on the same level, this can only be done with outside help. The author has tried this for the first few weeks in 2016, resulting in the following table 14. Anything from complete, this table still shows the daunting task of making every class both overlapping, so that those who couldn't come can still catch on, and interesting for those who did come with a little but important progress.

Table 14: Threads in DK and S1 classes in early SS 2016

Thread of German contents (translation on request from the author)

For example in order to connect the contents of learning with the life of the students and the “reality” in Germany, as well as an emotional element, the author has been able to sort a number of German hit songs in Germany (where most songs are still in English!) in an order of increasing grammatical and vocabulary difficulty as well as managing personal relationships, from becoming independent to having a boy/girlfriend to proposing to divorcing to settling for a mid-level of happiness (table 15). (see Reinelt 2016c,d) for more details, as on the topics in relation to the students’ previous learning: American Christmas, Hotel Mama and others). However, few subjects can be presented in such a nicely gradable way, so the instructor has to be on the prowl for materials literally all day and night.

Table 15 German hit songs with real-life relevance as multidimensional contents

A series of recent hit songs from Germany (G-pop), which deal with contents related to the learners’ everyday life: Managing personal relationships, from becoming independent to having a boy/girlfriend to proposing to divorcing to settling for a mid-level of happiness

As presence in the courses can only take care of speaking, the learners have to take care of their writing themselves. This can also be managed as a service to each other if every learner enters one part of the writing on the blackboard during class afterwards into a class moodle for everyone to see, as can be seen in table 16. The teacher has those present enter one part each of the lesson contents into a protocol on the course moodle website as a record of what was spoken or new words etc. Alas not many participants actually enter something....

Table 16: Elements from protocols, here: S3

Note: The first entry has to be made as template for the others to enter contents.

In order to make the best use of the moodle course site, many actions would be required for the protocols, such as regular corrections, but as the author is alone, this has to wait. On the other hand, the protocols can be used as source for the term-final or mid-term tests as well as small tests. The possibilities are limitless and research into them has not even begun

4. Evaluations of the courses and comments on the most recent courses

As the courses are supposed to make sense and fall into a system, they have to undergo evaluations, not only as a whole, but every single part of and within them. Thus, every part has to be developed from scratch, especially ways of evaluating students and courses, and the need to develop new tests.

4.1. Evaluating the learners

In the case of evaluating the learners' progress, the first year oral exam can be extended and applied as indicated in the table about testing above. The oral exam should in any case be graded in two ways, *criterion-based* on a scorecard as in table 17, and *holistically* according to the prevailing scoring system in its institutional framework (in this case Ehime University). The scorecard, developed by the presenter (Reinelt 2012d), for the first year oral exam considers five criteria: pronunciation (n.d.), grammar, vocabulary, fluency and dialogicity; the grading is according to the German school system 1 is best and 5 is fail).

Table 17: The scorecard

Vorkommnisse:

Weitere Angaben:

Note, however, that once learners speak with a native speaker as oral exam speaking partner, they can never revert to a course mate as partner. Progress allows no regress.

If we are lucky, we can have native speakers rate and comment on the non-beginners (Reinelt 2015d, Pruefung 2015). The following table 18 is a gathering of comments on the oral exams of S1 to S3 students in the summer term 2016.

Table 18 SS2016 Nonbeginners: Comments of native speakers as speaking partners and raters

Commentaries of a native German teacher on SW1 to S3 students SS16; unsorted and anonymized
St1(S3)

Dominates the talk positively, speaks independently, repairs own mistakes, has fun in speaking, humorous, very positive

St2 (S3) spoke less in the trilogue test, but with the same strengths as S1, repairs mistakes, shows liking for the language in her initiatives

St3 (S3) Good Dialog, no problems with understanding, clearance necessary only oncebut soon remedied

St4(S1) Good pronunciation and asking questions, some difficulties in listening comprehension, and formulating a few sentences

St5(S1) Not very fluent, takes time to make sentences, thematically difficult, slow but o.k

St6(S1) partl about her topic difficult to understand, sounded by heart, little dialogic, alittle jumpy.

St7(S2)

Had to think at times, but principally fluent and good dialog, sometimes unclear whether understood, but answers correct.

St8(S2+)

Very good dialogue, no comprehension problems, subordinate sentences with deshalb?!, very positive, very fluent

+5 others

overall impression: in total a very good impression. Learners, especially in the 3rd year reach a very good level as they are even able to exchange about their major and many become very fluent, so that they have a good A-level and are very well on their way to B1. Many students can maintain a conversation over more than 10 minutes without difficulties. This is astounding especially with practical no outside target language native speaker contact.

As all tests have been recorded, there is still much room for research. In the end, we would have to come up with criteria that help our students in their development as well as demonstrate their step of achievement on their way to the next grade (formative assessment Wicking 2017).

4.2. Grammar

Grammar is usually not a big issue as students learn the necessary grammar while using it in class. Due to optimization requirements, minor mistakes remain, and a fundamental grammar review is necessary at certain stages, but we have no idea yet when this should be the case. Profile Deutsch, the CEFR-oriented textbook, does not give any grammar beyond B1, and after A2 there are only certain areas which need special attention (Reinelt 2017b, e). For our testing, we can turn this situation around and ask the learners to provide us with examples which in the end demonstrate their abilities as in table 19.

4.3. Writing

Writing in general can be tested with several tasks, some of which the students can actually elect. The following is a proposal for S2 und S3 (Table 20).

| - eine/die Jugend in Deutschland |
| 4. Dokken 2 (except the listening part) |

4.4. Phrasal German

With grammar and writing problems partly out of the way, the problem of phrasal German, or in general phrasal language beyond the early stages remains, or comes to the fore at the stages of S2 and S3. While Profile Deutsch offers phrases, there are as yet very few textbooks on this level and we are integrating phrasal expressions and issues in the usual classes wherever possible. The task for the future, i.e. how they could be tested, however, remains.

4.5. Evaluating the classes

Finally, the classes as a whole should be evaluated. For SS2016, we do not have extensive material as the term had to close down in a hurry. Instead of developing a separate questionnaire, we had to administer the first-year one and ask the students to apply it to their further German learning with the author. There were only four students all of whom responded.

After so much action by teacher and learners, we have to ask what has been attained and whether it was worth the effort. While the latter can only be answered by the learners themselves, the first question can be used to conclude this paper.

----- Aside -----

Due to the specific situation of the course, it is difficult to develop course tests. We are still in the early phases for this. Table 22 gives an example from one learner.

Table 22 Students' test answers

----- End of Aside -----

5. Conclusion: What has been attained, and future tasks

5.1. Habitual Native Speakers

5.1.1. Advanced learners as “habitual” native speakers

The fourth year students developed superior German speaking abilities. As all communication with them is usually in the target language, they can be considered “habitual” native speakers (Reinelt 2015e, 2017c). As such, we thought, they may be able to help us with the German teaching situation, for example in cases when no or not enough native speakers were available. However, a number of points had to be confirmed, in the following briefly described as scoring (lenient vs. severe) and speaking.

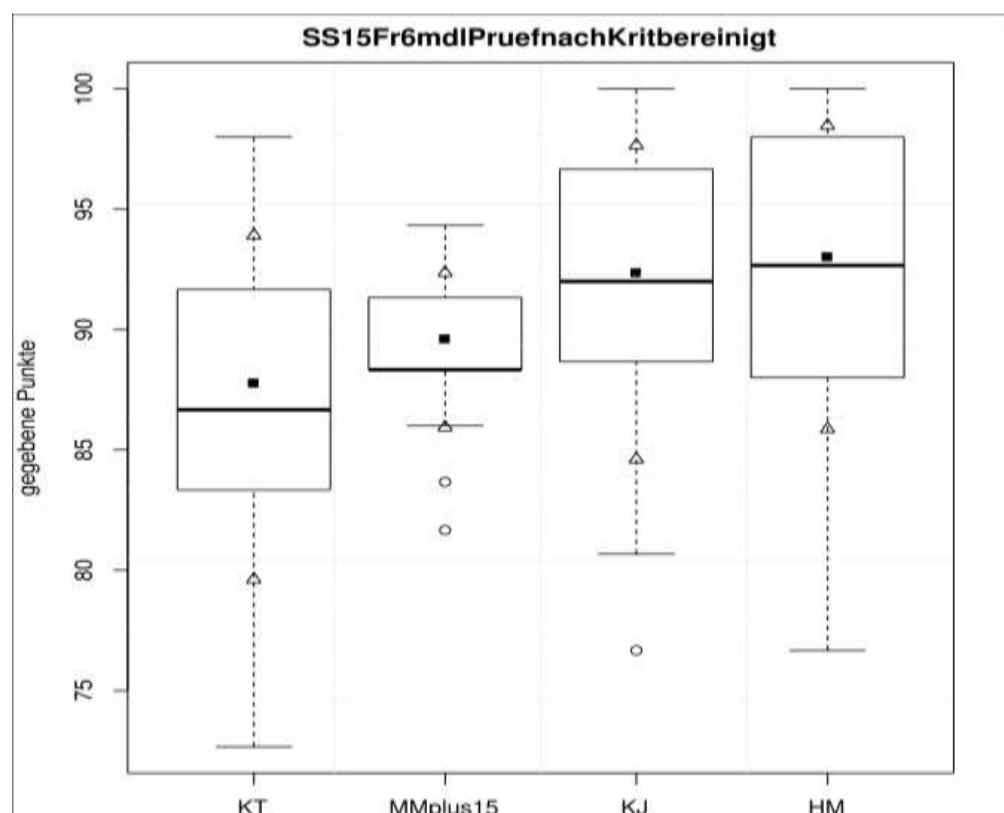

5.1.2. Scoring the first-year oral exam: Evaluations

When learners acquire a foreign language, they usually also acquire a feeling for and/or even knowledge about some lesser learner’s uses of this target language in speaking or writing. We thus asked the advanced learners to sit in and score in the oral-exams and checked their inter/intra-rater-correlation coefficient, and it showed that the differences were usually not very large, i.e. the ICC is in the 60 to 70% range.

However, in some cases the scoring may go astray on the whole, i.e. be too lenient, or too severe. For this, we also had to invent a measure, as the usual measuring of severity is too difficult (Yao 2014).

For one rater, who had consistently scored 10 points below the other raters, we had to adjust the evaluation, resulting in the following boxplot, see also Reinelt (2016b: table 23). Note that usually a re-training of the band would take place here, but we had no time for this nor was this useful as it may have influenced the overall rating by preventing spontaneity.

Table 23: Adjusted boxplots

Quality control beyond the basic statistics has been developed in Reinelt (2016b)

5.1.3. Advanced learners as oral exam speaking partners

Advanced learners could ensuingly serve as scorers and eventually as speaking partners in first-year students' oral examination dyads (see the example in the following table 24).

Table 24 An example with a habitual native speaker of German

| | S1 | | RR | | MM |

| 24 | Ich bin....ich bin.....achtzig.(1:18) | | | | |
| 25 | (1:27) Wie gross sind Sie? | | | 26 | Ich bin ein Meter sechzig(1:30), und Sie? |
| 27 | Ich bin ein Meter siebzig. | | | | |
| 28 | Haben Sie Telefon? | | | 29 | Ja! |

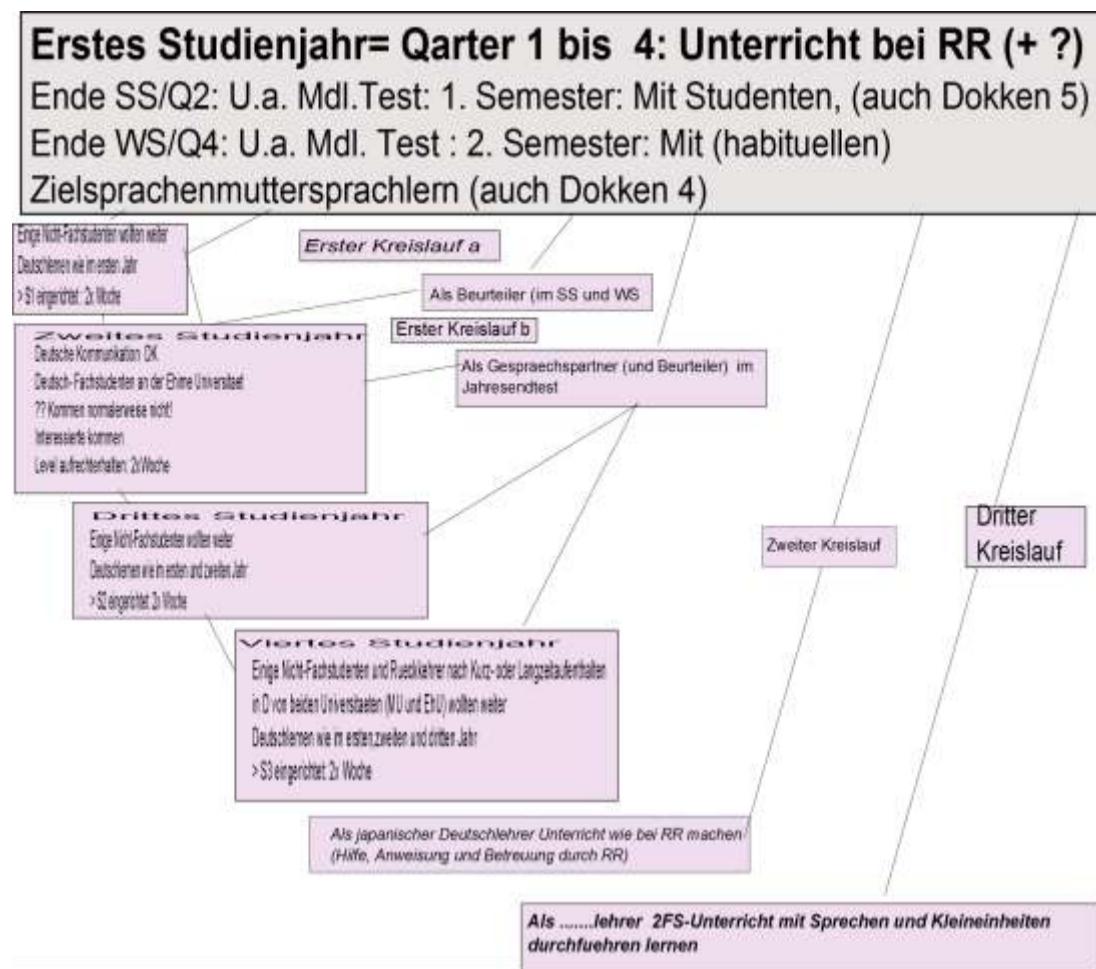

This dyad fulfilled all parts which a native speaker would have been able to speak with a new learner after one term.

5.2. The virtuous circle of learning German and the future of 2FLL in Japan

In the end the presenter was able to build up a recycling system of four years of continued and graded German second foreign language learning (Reinelt (2017d)).

If this optimized course development continues to produce "good" target language speakers, and teaching along this approach is continued, the process may become circular on a larger scale, and this virtuous circle (table 25) may be one of the vistas for the future of vast parts of other foreign language education beyond (but maybe also including) English.

Table 25: The virtuous circle of teaching and learning German and other foreign languages in Japan

5.3. Other Findings

This part briefly summarizes the findings of this paper.

- All courses are adjusted to CEFR (GER 2000)

As one task at Ehime University, all courses had to be adjusted to the CEFR. The results can be seen on the Ehime University homepage. The main point is that not all parts could be considered, but the main framework could be maintained.

- start from speaking

Contrary to most foreign language teaching approaches, the methods used in the classes presented here all started from speaking. Only after this was mastered for any one part was it possible to proceed to the next one. Using this approach, it was not necessary to recover contents learned from writing to speaking which is usually possible only under very specific circumstances.

- support by writing etc. later.

However, this approach does not foreclose the other skills, but leads to learning them as well (Reinelt 2012a, b, c). This is attained by practicing them in outsourced spaces such as the class Moodle.

- grammar not to be explained (but practised!): inductive learning

Grammar itself is not an item in teaching, but acquired as part of the learning of speaking. However, it can be made conscious if necessary. There are however practices in the homework. This proved to be enough after the relevant parts were acquired in speaking.

5.4. Future tasks

This part briefly mentions further tasks.

- spread

One obvious problem consists in how to spread this approach beyond the present author. One attempt at doing this is supporting another teacher who wanted to use this approach in his teaching. Reinelt 2018b reports on how this was materialized in 2015/2016.

- loss of students

Notwithstanding the university policy to make learning a second foreign language beyond one term ever more difficult and actively discouraging continuing, some students still finish the first year. Recently, many technical students, if they take any 2FLL at all, finish their learning thereof after the first term. This does make sense, as they can already speak with a native speaker after only one term as the tests with habitual and real native target language speakers have proven.

- optimizing

Although all courses in the first year are optimized (Reinelt 2017, 2017f) to a considerable degree, this has to be developed further for all subsequent courses. We are still in the early stages of this huge task.

6. References

Preface

Ample research has accompanied the course development and makes it available to research far beyond Ehime University. At that, many presentations by the presenter on many individual topics are available from the presenter. Especially, information on all courses are available from the presenter on request. Observers are always welcome.

Each of the songs is available on their homepages.

The new approach as a whole is still under development.
